<input checked="" type="checkbox"/> Discontinued Scheduled		
<input checked="" type="checkbox"/> Discontinued Unscheduled		
<input checked="" type="checkbox"/> Discontinued PRN		
<input checked="" type="checkbox"/> Discontinued Continuous/Titra		

12.

**NOTE:** Once the drug chart screen has been refreshed  0 minutes ago, the administered dose of the midwife exemption medication will only be visible as greyed out if the filter has been set to “All Medications (System)”. NB this applies to all medications and is especially relevant for IV fluids and any once only medications.

The screenshot shows the PowerChart interface with the filter dropdown set to "All Medications (System)". The "Time View" panel on the left has checkboxes for Scheduled, Unscheduled, PRN, Continuous/Titratable, Future, and Discontinued Scheduled, all of which are checked. The main area displays a medication entry for "Oxytocin (Oxytocin (Midwife Exemption))" with a dose of 10 unit and a route of intramuscular injection. The entry is marked as "Discontinued Scheduled" and is greyed out. The date and time are 16/Mar/18 09:50 GMT.

If the filter is set to All Active Medications (System), any completed medications are not visible on the screen. The same applies to the requests / Care Plans tab in PowerChart.

The screenshot shows the PowerChart interface with the filter dropdown set to "All Active Medications (System)". The "Time View" panel on the left has checkboxes for Scheduled, Unscheduled, PRN, Continuous/Titratable, Future, Discontinued Scheduled, and Discontinued Unscheduled, all of which are checked. The main area is empty, indicating that no medications are visible under this filter.
