

DISCERN NOTIFICATION

1. It is good practice to read, action and delete all Discern Notifications for your patients as you go.

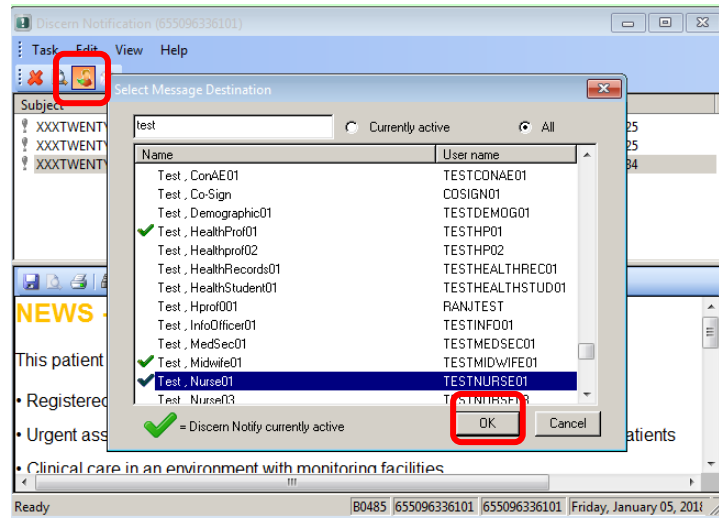

A Discern Notification will pop up when specific data is signed in the system. These are designed as reminders/warnings to notify you of suggested care plans or actions that need following if a patient has triggered a high NEWS/MEOWS. An example can be seen below.

2. Discern Notifications pop up separately to the PowerChart application and therefore have their own icon in your task bar  you can minimise and recall them from here. If you try to close this Discern Notification pop up when there are still messages in there, it will only minimise to the toolbar.

3. Discern notifications can be sent to other staff members when necessary. To complete this, click the forward to user icon . Enter the staff members name that you wish to send it to and click the OK button.

4. To delete an actioned Discern Notification, highlight the Discern notification by clicking on it and click the  icon to delete. It will then be removed from the list.
