CLOSING A PREGNANCY

1.	From within the Woman's record, select the relevant tab on the Obstetrics View (for the purpose of this example, the Postnatal tab is being selected).
2.	Then click 'Close Pregnancy' on the right hand side under the Pregnancy Overview header. The details if entered correctly and thoroughly at the birth in Assessments/Fluid Balance should appear in this pop up as shown below. If not, the mandatory fields will be highlighted yellow. You can also complete any additional detail as required at this stage. If there is more than one baby, they will appear as another tab.
3.	Click on the Related Record Search icon to attach the baby record to the mothers. If there is only one baby, it will populate automatically, if there are multiple, a pop up will appear for you to select which baby you would like to attach to the details you are currently completing (repeat this process for multiples until they are all complete).
4.	Click OK to close the window. Obstetrics View will now display as below. If the pregnancy needs to be reopened, select 'Reopen last active pregnancy'. The pregnancy details have now saved to this mothers Pregnancy History.
